ServiceWave 2010 CONFERENCE

13TH-15TH DECEMBER

Panelists

- Michael Boniface, *it-innovation*
- Vania Conan, *Thales*
- Anastasius Gavras, *Eurescom*
- Jacques Magen, *InterInnov*
- Scott Kirckpatrick, *HUJI*

Motivation

- Fast prototyping, testing and experimentally driven research are key to speed up and leverage the deployment of new application and services.
- Role of testbeds:
 - The Offering: What is available out there?
 - Is it usable? Adequate?

Issues

- Match/mismatch between the needs, requirements and solutions currently available (“Open” vs “Commercial” vs “Private”)
- How to better orchestrate the offering and stimulate the usage?
- International positioning!
- What do we learn?

Questions

- 1/ Why do we need to develop common “open” activities and solutions for providing Service platforms (isn't it available out there?)
- 2/ What concrete form should they take if any (the offering)
- 3/ Is it possible to reconcile the academic and industrial objectives/expectations
- 4/ Business models and sustainability, legal aspects
